DETAILED ACTION

1. Applicant's arguments in the Appeal Brief filled on September 30, 2005 has been considered and is persuasive. In particular, applicant's arguments that the combination of the prior art does not teach nor suggest the limitation of "a variable number of unsuccessful power-on password attempts permitted based upon at least one other factor chosen from time of day and day of week" is persuasive. Hence, the prior art rejections on the claims are withdrawn

Allowable Subject Matter

2. Claims 1-10 are allowed.

3. The following is an examiner's statement of reasons for allowance: Applicant's claimed invention recites a system for establishing a level of security in a personal computer. The prior art of record discloses such an invention. In particular, Golding discloses a computer system having a power-on password stored in memory, wherein access to the system is enabled by the entry of the power-on password; Frisch discloses a security profile with a variable having a maximum number of unsuccessful login attempts before the login screen is locked (u_maxtries), and Frisch also discloses restricting login access on specific times of the day or days of the week. However, these teachings do not collectively suggest nor teach the claimed limitation of "a variable number of unsuccessful power-on password attempts permitted based upon at least one other factor chosen from time of day and day of week," since the feature of

restricting login access on specific times or days of the week does not establish a teaching for changing the number of unsuccessful login attempts during the specified restricted login access times as argued by applicant. (Appeal Brief, pgs. 4-6) For this reason, the claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
